AX35559 to AX35578 represent human biallelic markers from the present invention, which contain a polymorphic base at postion 24 of their nucleotide sequences axa55579 to AX377440 represent amplification primars for the biallelic markers of the health contains a variety of usees they can be used for high density mapping of the human genome, and in complex ascordation studies and hablotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and disponses reproduce the support of the containing the development of characterisation of the differential efficacious responses to an side of the representation of the differential efficacious responses to an side of the containing the differential efficacious responses to an side of the containing the containing of the containing the containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     genemic map; haplotype; phenotype; polymorphic base; genemic map; hybridisation; identification; characteris, amplification; single nucleotide polymorphism; SNP; PCR diagnosis; ss.

Genome sequence of Chlamydia trachomatis

Disclosure; Page 1693; 1755pp; English

PCR primers ANZO1426-206209 were used to amplify open reading frames (ORTS) of the genome of Chlamydia trachomatis (see ANZO1425). These ORTS encode polypeptides (see ANZ01425) which can be used as vectimes against Chlamydia trachomatis. Antienne and tiboxyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, and inclusion conjunctivitis, genified diseases such as nongonococcal urcentitis, epidymitis, cervicitis, salpingitis, perihepatitis, batrbolinitis; penumpathy in breast feeding infants; perihepatitis, batrbolinitis; penumpathy in breast feeding infants; incuttom may be of use at treating these diseases. These ORFs

The method can be used in the treatment of disorders in which the exhaustion of pencreatic beta cells is involved, such as diabetes. The present sequence represents a PCR primer which is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           aure invention relates to a novel Disrupted-In-Schizophrenia (DISC) 1 alloley variant polymucleotide. The polymeptides of the invention have neuroleptic activity. The polymucleotides may have a use in gene therapy. DISC1 or DISC2 nucleic acid molecules are useful for diagnosing or treating a subject having a disease or disorder associated with specific DISC1 or DISC2 alleles and/or oberrant DISC1 expression or activity e.g. neuropsychiatric disorder such as schizoaffective, bipolar, unipolar affective or adolescent conduct disorder or schizophrenia, Similarly, the compound that inhibits DISC1 protein activity may be used in the method for treating such neuropsychiatric disorders. The sequences shown in ARQ3564-ARQ3574 represent the polymorphic sites and boundary sequences present in DISC1.
                              Dikero-P-diuconic acid reductases, isolated from the environment using polymerase chain reaction methods, useful to provide new catalysts with desirable traits for industrial processes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2,5-diketo-D-gluconic acid reductase c; DKGRc; aldo-keto reductase; glucose; ascorbic acid; 2-keto-L-glionic acid; vitamin C; immunogen; catalytic efficiency; thermal stability; solvent tolerance; pH optimum; PCR; primer; s8; pI-14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New human Disrupted-In-Schizophrenia (DISC) 1 and DISC3 genes
containing single nucleostide polymorphisms, useful for preventing or
treating neuropsychiatric disorders e.g. schizophrenia

The present invention relates to enzymatic and antisense nucleic acid molecules that act as inhibitors of the expression of repressor genes

Claim 37; Page 85; 164pp; English

ននាននានន

protein and interferon alpha.

encoding the TR2 Orphan receptor, BAR2/COUP-TP-1, the GAPA transcription factor gen. IRP-2 and/or the CAPT Displacement Protein (CDP). Inhibition (of the repressors removes prevents inhibition (and consequently increases expression of) genes involved in the production of consequently increases expression of genes involved in the production of crypthropoletin, granulocyte colony stimulating factor

enerosis polypeptides that couse long Of syndrome. EEE concision and potential polypeptides that couse long Of syndrome. EEE concision and potential this ion channel. SCMSA concise cardiac solin channel. All this ion channel. SCMSA concises a cardiac solin channel like of matching this solin channel. SCMSA concises thought to cause chromosome 1-linked long Off. The probes applitied by them per sequences that hybridise to the concision mutant sequences of the invention put on not hybridise to him encoding the mutant sequences of the invention and the support of the sequences of the invention of the support of the s

mutants.

DMA. The amplified sequences can then be used as probes for the mutant HERG sequences of the invention. The mutant SUNA coding sequence of the invention, and the mutant HERG coding sequence of the invention both

The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses disposit, prognosis, treatment addor monitoring of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders allowing for improved and informed treatment of patients.

                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a HERG protein having a mutation compared to wild-type HERG, and is useful for developing products for the diagnosis, prevention and treatment of long QT (LQT) syndrome. The products and methods can be used for the diagnosis of subjects with LQT syndrom. The bused to screen for drugs for treating or preventing LQT syndrome. The HERG mucleic acids can also be used for gent between the HERG specified can be used for peptide scan be used for peptide son between the therapy, Begnerose AAA07607-623 represent PCR primers for SSCP analysis of the HERG gene.

The methods and variants are used to treat human breast and prostate cancer and proliferative disorders indusing appropriation to call expressing the prolactin receptor and the prolactin variants also act as antagonists at the prolactin receptor. The present sequence is a PCR primer used to isolate the human prolactin CDMA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    proliferation and use as marker for the efficient diagnosis and treatment of prostate cancer. The invention includes AS3 cMNA and protein sequences, a vector comprising the cDNA sequence, a host cell transfected with the expression vector, and a method for producing an AS3 polyephide comprising culturing the transfected cells. AS3 has cynostatic activity, and acres to suppress cell proliferation. The AS3 gene is useful as a marker for the efficient diagnosis and treatment of prostate cancer. The AS3 nucleic mediation of gene expression. The AS3 process may be used as a source of antisense agents for sequence specific mediation of egene expression. The AS3 process may be used in the treatment of disorders caused by aberrant modification or mutation of a gene encoding an AS3 protein may be compared to the AS3 content to the AS3 content and the content process and the content process content process.

The explod is used to treat human breast and proteste cancer and proliferative disorders. The method is also useful for inducing apoptosis in ceals expressing the prolactin receptor. Nino provided in a cell-based setsgonists at the prolactin receptor. The provided in a cell-based assay system that can be used to identify compounds that modulate prolactin receptor.
                                                                        Use of human prolactin variants to treat breast or prostate cancer, methods of inducing apoptosis -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            comprises exposing the cell to an effective concentration of a variant of buman prolectin having a substitution of the glycine at position 129 or a cell-free truncated prolactin receptor. The method is used to track human breast and prolacted cancer and prolactative disorders. The method is also useful for inducing apoptosis in cells expressing the prolactin receptor. The prolactin variants acre as antagonists at the prolactin seceptor. Also provided is a cell-based asset system that can be used to

Microrubule associated proteins comprise a group of proteins that mediate microrubule assembly and function which is required for Cyroskeletel integrity. MAY is a member of the non-neuronal extructural MAP family and is believed to affect microrubule dynamics by stabilisting the microrubule lattice. MAY expression has been shown to be elevated in cella with mutant p33 oncogene expression, and is therefore linked to cancer cheencheapeutic drug sensitivity. These antisense molecules are useful for treating animals, particularly humans, having or being prome to a disease or condition associated with the expression of MAP4. The oligonucleotides are also useful for research and diagnostic
                                                                                                                                                                                                                                                                                                      This sequence represents a preferred antisense oligonouloctide targetted against the gene encoding human microtubule resociated protein 4 (MAP4). Thibbition of MAP4 expression was measured by determination (MAP4).

The invention is useful for inhibiting the expression of human phospholipid scramblase I in cells or tissues and for treating an animal having a disease or condition associated with phospholipid scramblase I, such as inflammation, an immune disorder and a hyperproliferative condition, e.g. cancer. The invention is useful for dispossion, therapeutics and as

Example 1; Page 28; 45pp; English

The present sequence is that of degenerate PCR primer 33, which was designed from an antifungal peptide of Ampergillus niger, It is 1 of 3 forward primers (see ABV76076-78) and 3 reverse primers (see ABV76079-81) based on the antifungal peptide that were used in an example from the invention. Degeneration was used to cover most consent on the basis of Ampergillus codon use. PCR was performed on the antimicrobal polypeptide (see ABP5051) was codon an antimicrobal polypeptide (see ABP5051) was codonated an antimicrobal polypeptide (see ABP5051) was codonated. The isolated game is used in a claimed DNN construct for the recombinant production of A. niger antimicrobal polypeptide (see ABP5051) was codonated. The isolated game is used in a claimed DNN construct for the recombinant production of A. niger antimicrobal polypeptide is useful as a veterinary or the attendant of prophylactic agent for treatment or prevention of a bacterial or fungal (especially Ampergillus oryses or A. niger of the attendant of prophylactic agent for treatment or prevention of a bacterial or fungal infection (claimed), and can also be used on a tight of the articular or prophylactic agent for treatment or prevention of a bacterial or fungal infection (claimed), and can also be used on a tight of the control of the action of anti-dandruff products.

The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bromchitis and other airway diseases characterised by an inflammatory response. By elminating adenosine from the antisense ON, its liberation upon antisense degradation is prevenced, thereby preventing adenosine antisense that the degradation is prevenced, thereby preventing adenosine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A method for treating airway disease in a subject has been produced, which involves the topical administration of an essentially adenosine free antisense oligomucleotide (ON) to the airway epithelium of the subject. The present sequence is an antisense oligonucleotide
a lambda clone containing DNA encoding the Neospora caninum proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                    26-MAR-1998;

                                                                                             cancers and respiratory obstructions -
                                                                                                                               Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating
```

The present invention describes low adenosine (A)

Linky reasy, when you have you provided and continued and pulmonary transplantation rejection, pulmonary infections, bronchitis and/or cancer. AAR19434 to AAR19434 represent human polynuclectide fragments and antisense oligonucleotides used in the exemplification of immunosuppressive, antiasthmatic, hypotensive and cytostatic activities
The antisense oliconucleorides and ID can be used to down-regulate the
expression and or settivity of target polypeptides associated with the present invention. oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base hypertension, emphysema, chronic obstructive pulmonary disease (COPD) can have respiratory, bronchodilator, antiinflammatory, analgesic,

Representative examples of ribozyme recognition sites are given in AAA82415 to AAA66787. The ribozyme of the invention is useful for inhibiting restenosis by introduction of the ribozyme into cells.
     The present invention describes a new composition comprising

The invention relates to a purified or isolated polypeptide (I) chosen from a Nospora centinum microneme-associated (MIQ1) protein, a polypeptide having an amino acid seguence that is homologous to MIC1 protein, a polypeptide consisting of a portion of MIC1 protein (its homologue), their fusion protein or analogue or derivative of the above sequences. Polypublications and proteins of the invention are useful for proparing a vaccine against neceptoresis and other diseases or vaccine sequence is that of a virus. The polymolocitide is useful for preparing modified N. continum expressing a meant form of MIC1. The present sequence is that of a N. continum SMG1 related PCR primer of the invention.
Sequence 19 BP; 3 A; 4 C; 6 G; 6 T; 0 other.

Neospora caninum SAG1 PCR primer SEQ ID NO:25 Neospora caninum; GRA1; GRA2; MIC1; SAG1; MAG1; vaccine; neosporosis;

Durtschi BA, Krishnan BR, Yoder SC;

The present invention describes a substantially purified or isolated polypeptide (1) as a polypeptide with an amino acid sequence that is homologous to an N. centnum GBA2 procesh (1) a polypeptide consisting of a portion of N. centnum GBA2 procesh (2) and polypeptide consisting of a portion of a nanlogue or derivative of (1) and period which is homologous to in analogue or derivative of (1) and period enterprocesh (2) and can be used for procesh (1) and a polypeptide and antibacterial activities and can be used for upoparing a waccine (11) and gainter homoporosis. (11) can be used for upoparing a waccine (11) gainter homoporosis. (1) is useful as defined for vectoristing a mammal againter homoporosis (1) is useful as diagnostic reagents, to acreen for Neosporosa specific antibodoise in blood

                                                             Ce The sequences given in ABA00101-21 are primers which were used in the Cc isolation amplification and sequencing of N. cantinam cDMA; S. The C isolated cDMA to encode presime which may be used in vaccines against C measures. This primer was used to identify the SAO1 gene sequence to the Meospora putchins are useful as diagnostic reagents, to screen for the Meospora putchins in thiodies in blood or serum semples from animals, or a stringer into spolyhoral or menoclonal antibodies which are cuseful as diagnostic reagents and to streen for Meospora-specific properties of third samples from an animal. Primers compare specific polymicleotide molecule for use, or, in differential confidence diagnosis, or to encode or act as antisense molecules useful in gene regulation. The sequences of the polymicleotide molecules can also come regulation of the properties for use in a solution of the compared the molecules of the polymicleotide molecules can also come used to design primers for use in isolating homologous genes from the properties for the polymicleotide molecules can also the properties for a statistic of Meospora.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequences (AAGS3077-GS3136) are used in the invention to detect specific genes without the use of radio-scorpes. Detection is carried out by hybridisation of denatured (ss) sample DNA with a (ss) nucleic acid probe, complementary to the target sequence. Hybridisation occurs on the surface of an electrode or optical fibre and detection is visualised by the addition of an entity that recognisee (ds) bybridised DNA and is electrochemically / photochemically active.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 20 BP; 2 A; 2 C; 10 G; 6 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detection method of gene without using radio-icotope - by hybridisation of nucleic acid probe which is single strand having complementary sequence of gene and single strand denatured sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Page 23; 26pp; Japanese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              for identifying and localising dog genes, since it covers approximately 80 % of the dog genome and provides a dense map integrating different types (i.e. Type I and Type II) of markers. The map and the dog genome and markers of complementary sequences) are especially useful to identify genes responsible for phenotypic and behavioural traits in dogs, to identify morbid genes, to analyse diseases and identify implicated genes in such diseases and theritalists, and to study dog pedigrees. They may also be useful for isolating corresponding human gene sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New radiation hybrid map of the dog, Canine familiaris, genome, useful for e.g. identifying genes implicated in phenotypic and behavioral traits or in genetic diseases and for studying dog pedigrees.

                 The invention relates to a method for selecting optimal subsequence antisense targets. The method involves preparing antisense regress of target makes the capture of inhibiting subsequences of target makes sequences, as well as antisense oligonucles to great of binding DNA, The antisense and antisense inhibiting to the capture of the 
                                                                                                                                                                                                                                   Selecting optimal subsequence antisense targets for inhibition of {\tt mRNA} expression of target {\tt mRNA} for the therapeutic treatment of genetic

                 sequences, as well as antisense oligonuclectides capable of binding DNA. The antisense and antisense albraries are useful for preparing therapeutic agents for the treatment of genetic disease. The present DNA sequence is phosphorothioate antisense oligonuclectide which is targetted to Brome
                                                                                         The invention relates to a method for selecting optimal subsequence antisense targets. The method involves preparing an antisense cligonucleotide capable of inhibiting mRNA expression of target mRNA
                                                                                                                                                                                                                                    Selecting optimal subsequence expression of target mRNA for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The present sequence is shown in vivo, this target sequence would

Child present sequence represents the imment owners variation and controlled protein which is a movel non-transmendrane protein which is controlled protein controlled for shrift on special controlled protein controlled for shrift on maps to chromosome s. Shrift a useful for shrift on maps to chromosome s. Shrift a useful for cateritying compounds which can thind and modulate shrift protein cateritying compounds which the shrift and controlled protein caterity of broadcasting the supereston/activity of Shrift to modulate caterity of shrift protein caterials, such as a B- or T-cells, preferably caterials and caterials and caterials. Shrift on the streament of acute metolaid controlled caterials and caterials and caterials. Shrift on the streament of acute metolaid caterials and caterials and caterials and caterials. Shrift on approach as the superior caterials and autoimmune diseases (e.g. anithree call problems of caterials and alternative call death or apoptosis, and to induce only problems of caterials and caterials. Shrift or equilators of caterials and caterials and caterials and caterials and caterials and caterials.

                                                                                                                                                                                                                                                                                                                                                                                                                                        Chiba Y,
Jigami Y,
                                                                                       Sequence 20 BP; 6 A; 4 C; 6 G; 4 T; 0 other;
                                                                                                                              like erythropoietin, cytokines, and tissue plasminogen-activating factor in drug compositions for medical treatment and in other fields such as science and in industry. The present sequence represents a PCR primer specific for the alpha-mannosidase II C-terminal DNA, the primer is used
                                                                                                                                                                                       mund mutations, which can produce a glycoprotein that contains an asparagine bound type sugar chain with an oligoaccharide chain. The invention includes a method for producing alpha-mannosidate II by culturing the yeast strain to accumulate the product for isolation from the cultured material. The sugar chains and glycoproteins are applicable the cultured material. The sugar chains and glycoproteins are applicable to the cultured material. The sugar chains and glycoproteins are applicable.
                                                                                                                                                                                                                                                                                                   Example 7; Page 35; 83pp; Japanese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                   The present sequence is a forward PRB primer for novel human TRBM 2 (triggering receptor expressed on myeloid cells) chak (see ARR70450) TRBM 3 (see Alar expressed selectively considerable protein expressed selectively considerable and identific cells (DOS) but not on granulocytes or monopy partial posterial time of TRBM 2 leads to DC standards and indices strong the partial considerable continuous considerable continuous considerable continuous c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid molecule encoding a triggering receptor expressed on myeloid cells (TREM) - 0 TREM, 2 polypeptide, useful for treating or (meliorating a disease or condition in a subject associated with TREM)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The specification describes an insulin-secreting cell, comprising a pancreatic cell transferted with islet dwokenal homeobox-1 (IDX-1) colls and cell transferted with islet dwokenal homeobox-1 (IDX-1). The cell exhibits a dose-dependent response of insulin secretion when exposed to glucose. The insulin-secreting cells and cell lines are useful for investigating the function and development of pancreatic cells, to test the efficacy of drugs that simulate simulin secretion, or to develop new approaches to treat dubbres. PCR primers M877/612-13 were used to amplify a fragment of the insulin opener. The primers were used to test the effect of GLP-1 on pancreatic cells, in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; TREM-2; triggering receptor expressed on myeloid cell; receptor; immunosuppressive; antiallergic; gene therapy; PCR;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes nucleic acid molecules which modulate the synthesis, expression and/or stability of a make encoding 1 or move receptors of vascular endothelial growth factor (VEGP). A patient (preferably human) having a condition associated with the level of the fine-like tyrosinm kinase I (fit-1), kinase insert ontaining receptor (KDR) and/or foetal liver kinase I (fik-1) (e.g. tumour angiogenesis, ocular diseases, psoriasis and thomatoid arthritis) can be treated by administering the nucleic acid molecule or the expression of nucleic acid molecules from the present invention.

The invention relates to a nucleic acid molecule which down regulates expression of a CD21 gene and a nucleic acid molecule which down regulates expression of a neurit growth inhibitor gene (MCG2). The nucleic acids (e.g., a ribozyme or a DNAzyme) an inoxyme (an endolyte nucleic acids (e.g., a ribozyme or a DNAzyme) an inoxyme (an endolyte nucleic acid cleaving a na DNA molecule possessing an MR motif), a G-Cleaver (Cleaving RNA with a NYM motif) and the control of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 30; Page 150; 200pp; English

The present sequences are not proposed to the sequences are not homes as the sequences are the sequences are the sequences. The present sequence represents an object to the sequence of homes are the sequences are the sequences are the sequences.

© The present invention describes a human genome derived myosin-like CC protein in [DBMML-1]. The protein and polymochedide sequences of C MSDMLF-1 can be used in gene therapy polymochedide to be described to the control of the present control of the homelr-1 is contined to control of the homelr-1 in control of the present control of the homelr-1 in control of the present control of the homelr-1 in control of the present control of the homelr-1 in control of the homelr-1 in control of the present control of the homelr-1 in control of the present control of the homelr-1 in control of the homelr-1 in control of the present control of the homelr-1 in control of the homelr-1 in control of the present control of the homelr-1 in control of the present control of the homelr-1 in control of the present control of the homelr-1 in control of the present control of the homelr-1 in control of the present co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          30-JAN-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   is a pUCIA-based plannid comprising the S correvisian alphaer prepro-
signal sequence, the lyes argiglu-sla, processing altes, the GRF ga-
and the P pactoris ADMI terminator ADM203 was used to attach a
yeast-specific secretion signal to a sythetic gene. The synthetic
gene used was a MM112-type processe inhibitor (RFI).

N.B. The SBO ID NOs 2052, 2911, 2974, 3035, 3096, 3157, 3227, 3297 and 33677, are not actually given a sequence in the Sequence Listing
                                                                                                    AW36564 to AM26978 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences, AM68979 to AM27440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a warker, of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the generic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of characterisation of the differential efficacions as well as the charges from pharmaceutical agents acting on a disease as well as other research.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                     The invention relates to antisense oligonuclectides (ADM) complementary to a gene that encodes a mammalian vascular epidermal growth factor (1937) receptors Eli-1 or Eli-1. The ADM are useful for reducing pathological angiognossis and, where directed against Fil-1, synthesis of plateles attuating Section. They are used for treating inlamation, unplate necessaries must object on the part of the contract of plate diseases (disbetion teresting inlamatical hyperoxic retiropity) of operal lead macular degeneration), arthritis, porticais and arteriocclassis (ADM) are also special for recently and diagnosis, particular for specific desettion of NI-1 or Fix-1. The present acquence represents an antisense oldyo directed against the bovine Fix-1 mRM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Use of the vascular endothelial growth factor receptor inhibitory ligand or nucleic acid encoding the receptor as anti-angiogenic agent
                                                                                                                                                                                                                                                                                                                                                                   receptors Flt-1 or Flk-1
